

## **Biolux Research Announces Appointment of Dr. Cameron Clokie as Chair of Scientific Advisory Board.**

**VANCOUVER, B.C., CANADA – Aug 20, 2008** – Biolux Research Ltd. Is very pleased to announce that it has appointed Dr. Cameron Clokie, DDS, OMFS, PhD, as Chair of its Scientific Advisory Board (SAB). Dr. Clokie is renowned in the field of implantology, and was part of the pioneering group to develop the clinical field in Canada decades ago. For the past ten years Dr. Clokie served as Head of Oral and Maxillofacial Surgery, Faculty of Dentistry, University of Toronto, and is currently a partner at very successful private practice in Toronto. Dr. Clokie has also successfully commercialized numerous dental products in the tissue regeneration space.

As Chair of the SAB, Dr. Clokie's principle responsibilities will be to collaborate with Dr. Peter Brawn, Founder and Chief Scientific Officer of Biolux, to develop the company's clinical roadmap to ensure that the technology and the products are both developed with and proven by scientific studies. Additional responsibilities will be to develop and coordinate in vitro, animal and clinical research protocols, to develop a scientific portfolio to support commercialization of the OsseoPulse™ Bone Regeneration System, and to recruit other luminaries as members of the SAB.

"I am excited about joining Biolux and their efforts to accelerate regeneration in implantology and other areas of dentistry," states Dr. Clokie. The dental market has had a long and very pressing need to reduce bone regeneration and overall treatment times, and Biolux has developed a very novel approach based on light treatment of the tissue itself. I look forward to working with Peter and Biolux in building a scientific foundation to commercialize products."

"We are very pleased to have attracted Cameron to our team, as he is a proven top-calibre individual with extensive research and clinical experience in implantology and maxillofacial surgery," adds Dr. Peter Brawn. "Cameron will add significantly to the team and reaffirms our commitment to solid science and technology development as we look at future applications in orthodontics and orthopedics. His entrepreneurial and commercialization experiences will also contribute greatly to our long-term success."

The OsseoPulse™ has already received a Health Canada Medical Device Licence, and Biolux is currently establishing production of initial inventory of product to support market launch later in 2008.

### **About Biolux Research**

Biolux Research Ltd. is a world leader in the development of light activated bone regeneration systems for dentistry. Biolux focuses on product development, clinical and basic research and is well positioned to release its OsseoPulse™ system to the marketplace in 2008. Its proprietary, patent pending OsseoPulse™ Bone Regeneration System is premised on a vision to transform the practice of implantology and oral surgery in dentistry by accelerating implant integration and bone regeneration in a safe, effective and non-invasive approach.
